Facundo Luna

Backend Developer | Java + Spring Boot | REST APIs

facundolunaok@gmail.com | github.com/Facugl | linkedin.com/in/facundoluna

Santiago del Estero, Argentina | Open to Remote Work | English: Professional working proficiency

Professional Summary

Backend developer focused on Java 17, Spring Boot, and REST APIs. Hands-on experience from two in-depth personal projects and a remote agile team project: a banking backend with JWT authentication, database-driven RBAC, and 108 automated tests, and InventoryIQ, an inventory decision-support platform built on hexagonal architecture and Domain-Driven Design. Seeking a backend role to build reliable, maintainable software and keep growing as an engineer.

Technical Skills

Back-End: Java 17, Spring Boot 3, Spring Data JPA, Spring Security, Hibernate, REST APIs
Testing: JUnit 5, Mockito, MockMvc, Testcontainers, Vitest
Databases: PostgreSQL, MySQL, SQL, Flyway
DevOps & Cloud: Docker, Docker Compose, Git, Maven, GitHub Actions (CI/CD), AWS (EC2, RDS)
Front-End: React, TypeScript, JavaScript, HTML, CSS, Material-UI, Tailwind CSS

Personal Projects

InventoryIQ *Aug 2026 – Oct 2026*
github.com/Facugl/inventoryiq

Decision-support platform turning sales and stock data into purchase recommendations.

- Modeled reorder point, safety stock, seasonality-adjusted demand, and ABC/XYZ classification in a framework-free domain layer, independent of Spring and persistence (hexagonal, DDD).
- Exposed a Spring Boot REST API documented with OpenAPI/Swagger, plus a 9-screen React dashboard for alerts, critical stock, overstock, and recommendation review, over a simulated catalog.
- Persisted recommendation history in PostgreSQL, covered the backend with 350+ tests including Testcontainers integration tests on GitHub Actions, and deployed the stack to Render + Neon.
- *Technologies:* Java 17, Spring Boot, PostgreSQL, React, TypeScript, Docker, TanStack Query.

Banking System *Dec 2024 – Sep 2026*
github.com/Facugl/banking_system | Live Demo

Banking backend simulating accounts, deposits, withdrawals, transfers, and transaction auditing.

- Designed and implemented 35+ REST endpoints, secured with stateless JWT authentication and database-driven RBAC (Module, Operation, Role, Permission).
- Wrapped each multi-step money operation in a single `@Transactional` unit, so a transfer's debit, credit, and ledger entry commit or roll back together.
- Audited the Spring Security setup and fixed two real defects: a username-enumeration oracle and a crash in the JWT filter on a malformed `Bearer` header.
- Backed the code with 108 tests – Mockito unit, MockMvc web-layer, and Spring Boot integration – and moved CI/CD to GitHub Actions, gating each Render deploy on a green suite.
- *Technologies:* Java 17, Spring Boot, Spring Security, MySQL, Docker, GitHub Actions, JWT, Flyway.

Experience

Frontend Developer – No Country (Team Simulation Project) *May 2023 – Jun 2023*
Remote

- Built the reservation booking flow and admin dashboard views of a restaurant web app with a remote team of six, collaborating via GitHub pull requests, code review, and agile ceremonies.
- Consumed a REST API from React with axios, adding bearer-token-protected routes, form validation, and user-facing error handling.

Education

Bachelor's Degree in Data Science *2026 – Expected 2030*
Catholic University of Salta, Argentina
